INSTALLATION

Certified Network Cable Installer (CNCI[®])

Demonstrate the highest levels of knowledge, skills and competency in network cable infrastructure.

Program Overview

Undertake copper and fiber cabling installation, termination and testing to the highest quality whilst complying to industry best practice and standards to ensure a right first-time approach.

The Certified Network Cable Installer (CNCI®) has become the industry preferred certification for network cable installation and is specified as a requirement on many job profiles and installation project contracts. In addition, manufacturers, major installation companies, associations and consultants endorse the certification knowing that it provides the right level of technical knowledge, competence and confidence to the industry. In recognition of the CNCI® certification, many manufacturers also award accreditations towards their product warranties.

This comprehensive ten-day program offers the perfect mix of technical knowledge and practical activities for both copper and fiber component installation. Official CNCI® certification proves that an individual is certified to undertake network cable infrastructure projects to the highest caliber whilst working to the current national and international industry standards and industry best practice. During the program learners will be provided a valuable opportunity to access the latest industry standards. Having successfully completed this program, and with the appropriate level of experience, it is highly recommended that you continue your professional development by advancing your knowledge and skills to gain further official certifications and qualifications by progressing through The Global Digital Infrastructure Education Framework which maps education programs to career advancement throughout the network infrastructure and data center sectors.

The CNCI[®] program is classroom-based and led by one of CNet's expert Instructors.

Ask Us About Apprenticeships

Apprenticeship

The First Government Funded Apprenticeship for Network Cable Installation Across England.

Includes CNCI® plus CIIT® certification. To find out more, visit cnet-training.com/nciapprenticeship

The Global Leader in Technical Education for the Digital Infrastructure Industry

Program Duration

- ► 5 Day CNCI[®] Copper Cabling
- ▶ 5 Day CNCI[®] Fiber Optic Cabling

Program Format

50% Theory, 50% Practical.

Program Objectives

Learners will gain the knowledge and skills to confidently install, test and certify a complete copper and fiber cable installation.

Learner Profile

The CNCI® program is perfect for individuals wishing to acquire the very latest skills and knowledge to enable them to complete both copper and fiber cable installation projects to the highest standards. It is relevant to new entrants to the network cable infrastructure sector in addition to those already working within the cable installation environment wishing to formalize their knowledge and skills.

Pre-requisites

No previous experience is required to attend this program.

Program Requirements

Learners are required to have:

- A laptop or suitable device with unrestricted wireless internet connectivity and a pre-installed web browser
- ► A suitable application for opening and reading PDFs. Typically, your device's in-built PDF reader is sufficient

Qualification

- Pearson BTEC Level 3 Award in Certified Network Cable Installer (Copper)
- Pearson BTEC Level 3 Award in Certified Network Cable Installer (Optical Fiber)

Certification

- Official Certified Network Cable Installer (CNCI[®]) certification
- ▶ Use of the CNCI post nominal title
- ▶ Use of the CNCI® logo
- ▶ Use of the official CNCI[®] digital badge
- ▶ Fluke CCTT[®] certification

Certifications are a commitment to lifelong learning and offer the perfect portal to ensure knowledge, skills and certification remain current and up-to-date. Each certification gained requires re-certifying every three years via an online learning management system.

Additional Awards

- Eligibility for an ECS (Electrotechnical Certification Scheme) Network Infrastructure Installer (Level 3) card (only available in the UK)
- Continual Professional Development (CPDs)
- ▶ 10 IEEE Continued Education Units (CEUs)

details on cable installation, proper handling and testing."

► DC current principals Analogue versus digital

Health & Safety

- ▶ Legislation
- Workplace risk
- Electrical safety
- ▶ Working at heights
- ▶ Working in confined spaces

Standards

- ▶ Why standards?
- ► Standard bodies, BSI,
- ISO, CENELEC, TIA/EIA Relationships between
- standards Categories and classes

Fire Safety

- ▶ Why fire stop?
- ► Types of fire stopping
- ▶ Three pillars of fire stopping
- Construction Product Regulation (CPR)

Documentation &

- Labeling
- ▶ Floor plans
- ▶ Naming conventions
- ► Symbols
- ▶ Records

CNCI[®] Benefits for Individuals

Become one of the elite certified network cable installers in the country

Demonstrate the highest levels of knowledge, skills and expertise in network

Confidently install copper and fibre cable correctly in accordance with industry

best practice and in compliance with national and international standards

Demonstrate a sound knowledge of personal health and safety risks and take

Become proficient at selecting the correct products to effectively construct

Install copper and fiber network cable infrastructure projects on time and

> Possess the skills and aptitude to test and certify installed copper and fiber

cable infrastructure in accordance with the correct test criteria

pathways and containment systems to support cable infrastructure

> Plan individual tasks, and the materials required, accurately and

Testing & Commissioning

Continuity testing Certification/
